

Momentum Fitness — SEO Fix Playbook

Companion to: [audit-report.md](#) (the audit) • **Site:** <https://themomentumfitness.com> **How to use this:** Every fix below gives you the **exact text to paste** and **where to click** in WordPress. Work top-down — they're ordered by impact. Anything only you know is marked **FILL-IN**.

Two things before you start

1. **Back up first.** Your host (GoDaddy) or a plugin like *UpdraftPlus* can take a one-click backup. Do it before touching schema or bulk media.
2. **Where changes happen:** *wp-admin* = your WordPress dashboard (themomentumfitness.com/wp-admin). *Elementor* = the visual page editor (click **Edit with Elementor** on a page). *Rank Math* = your SEO plugin, both in the left sidebar and in a box below each page's editor.

1. Homepage 27 MB autoplay video [HIGH]

The homepage autoplays a **27 MB** video ([file.mp4](#)) plus a 1 MB loop. This is the single biggest speed problem. Two ways to fix — do **A** (fastest) or **B** (best).

Option A — stop it autoplaying (5 min, no new files):

1. Homepage → **Edit with Elementor**.
2. Click the hero video widget → left panel **Content** tab.
3. Set **Autoplay: No**, and set a **Poster** image (a nice still frame). Leave **Lazy Load: Yes** if shown.
4. Update. Now the big file only downloads if a visitor clicks play.

Option B — replace it with a small file (best result):

1. Compress the video first. Free tool **HandBrake** (handbrake.fr) → open [file.mp4](#) → use these exact settings:
 - Preset: **Web** → **Gmail Medium 5 Minutes 480p30**, then bump **Resolution Limit to 1280×720**.
 - **Audio tab:** remove the audio track (a background hero doesn't need it).
 - Format **MP4**, Video codec **H.264**. Target output **under 4 MB**.
2. In *wp-admin* → **Media** → **Add New** → upload the new file.
3. Homepage → Edit with Elementor → hero widget → swap the video URL to the new upload → Update.

Repeat for the other autoplay offenders: [members-1.mp4](#) (~6.7 MB) and the Instagram rip [Snapinst.app_video_...mp4](#) (~11 MB) on Pricing, Who We Are, Careers, and Gallery. The [Snapinst](#) file especially should be re-exported or dropped.

The testimonial videos elsewhere on your site are already done right (poster image + click-to-play). You're just bringing the hero up to the same standard.

2. Page titles — paste-ready rewrites [HIGH]

Where to set each one: open the page → scroll to the **Rank Math** box below the editor → click **Edit Snippet** → paste into the **Title** field → Update. (Do *not* retype the page's H1 — this is only the browser-tab / Google-results title.)

These are all ≤60 characters with the service + city first and the brand last. Skip any page you're going to noindex in §3–§4 (trainer, category, author, thank-you pages) — those don't need titles.

Core / money pages

Page	Paste this title
Homepage /	More Than a Gym: PT + Training Arlington TX
/pricing/	Personal Training & PT Pricing Arlington TX
/what-we-do/	Our Services: Training & PT Arlington TX

.../post-rehab-performance-gap-.../	Post-Rehab & Performance Gap Arlington TX
.../neurological-conditions-care/	Neurological Condition Care Arlington TX

Low-priority (optional)

/privacy-policy/ and /terms-and-conditions/ can keep their default titles — they don't rank and it doesn't matter.

3. Trainer pages — thin & orphaned [MED-HIGH]

Your 12 /team-member/... pages have ~15 words each, no meta description, and nothing links to them. Two options — **I recommend the quick noindex path** unless you're ready to write real bios.

Path A — Quick (recommended, ~15 min): hide them from Google.

1. For each trainer page: open it → **Rank Math** box → **Advanced** tab → set **Robots Meta** to **No Index**. Update.
2. Rank Math → **Titles & Meta** → **check for a "Team Member" / CPT section** and set its sitemap to **off** (removes team-member-sitemap.xml).

Path B — Better (if you want them to rank): give each a real profile.

- Use this template per trainer (replace FILL-IN): > FILL-IN Name is a FILL-IN role/credential, e.g. Doctor of Physical Therapy / NASM-CPT at Momentum Fitness in Pantego, serving Arlington and Mansfield. They specialize in FILL-IN 2-3 specialties and work with clients who FILL-IN who they help. FILL-IN one sentence of personality or a client win. (Aim for 150–300 words.)
- Meta description template: Meet FILL-IN Name, FILL-IN role at Momentum Fitness in Arlington & Mansfield TX. Specializes in FILL-IN. (~150 chars)
- **Make the team grid link to them:** Who We Are → Edit with Elementor → each team card's image/name should be a **Link** to that trainer's URL (currently they aren't crawlable links).

4. Junk pages in your sitemap [MED-HIGH]

These should never appear in Google. All fixes are in **Rank Math** → **Titles & Meta**.

1. **Categories:** open the **Categories** tab → set **Robots Meta** → **No Index**. (Drops </category/uncategorized/> and its sitemap.)
2. **Authors:** open the **Authors** tab → toggle **Author Archives** → **Off** entirely (you have two near-empty author pages, one leaking your agency's email in the URL).
3. **Thank-you page:** open </thank-you/> → Rank Math box → **Advanced** → **Robots Meta** → **No Index**. (Stops it showing in search and firing false conversions.)
4. **Rename "Uncategorized":** wp-admin → **Posts** → **Categories** → hover *Uncategorized* → **Edit** → rename to **Training Tips** (slug [training-tips](#)) → assign both existing blog posts to it.

5. Pages missing an H1 [MED-HIGH]

Every page should have **exactly one H1**. These currently have zero (or the homepage has three). In **Elementor**, click the main headline → left panel → **Advanced** → (or the heading widget's) **HTML Tag** dropdown → set to **H1**.

Page	What to do
Homepage /	Keep "Personal and Physical Training To Feel Your Best" as the only H1; change <i>"Specialized Training and Physical Therapy in Arlington"</i> and <i>"Services We Offer"</i> to H2 .
/pricing/	Set the top headline (near <i>"The Cost of Action..."</i>) to H1 — or add one: Personal Training & Physical Therapy Pricing .
/contact/	Set "CONTACT US!" to H1 .
/who-we-are/	Set "WHO WE ARE" to H1 .
/gallery/	Set "View Our Gym" to H1 .
/careers/	Set "Build a Career, Not Just a Job" to H1 .
/vip-membership/	Set "VIP MEMBERSHIP" to H1 .
/what-we-do/executive-membership/	Set "Executive Membership" to H1 .
/what-we-do/nutritional-guidance/	Set "Nutrition Coaching in Arlington & Mansfield, TX" to H1 .
/blog/	Set "OUR BLOG" to H1 .
/terms-and-conditions/	Delete the duplicate — it has two identical "Terms and Conditions" H1s; keep one.
/thank-you/	No action needed (you're noindexing it in §4).

6. Missing / duplicate meta descriptions [MEDIUM]

Once §3 and §4 are done, only these three need attention. **Rank Math** box → **Edit Snippet** → **Description**:

Page	Paste this description
/pricing/	See transparent pricing for personal training and physical therapy at Momentum Fitness in Pantego, serving Arlington & Mansfield. Book a free discovery visit.
/gallery/	Take a look inside Momentum Fitness – our private training facility and recovery space in Pantego, TX, serving Arlington and Mansfield.
/blog/	Training, recovery, and physical-therapy tips from the coaches and DPTs at Momentum Fitness in Arlington & Mansfield, TX.

7. Oversized images [MEDIUM]

26 files are over 300 KB, including six ~1 MB **PNG** squares and ~1 MB trainer portraits. Fix in bulk:

1. wp-admin → **Plugins** → **Add New** → search **ShortPixel** (or **Imagify**) → install & activate → grab the free API key it prompts for.
2. In its settings: enable **WebP/AVIF conversion**, set **Resize large images to max 1024px wide**, quality **Glossy/80**.
3. Run **Bulk Optimize** on the whole Media Library. Typically cuts those 1 MB files to 60–150 KB with no visible change.
4. **Going forward**: save photos as **JPG or WebP**, never PNG. PNG is only for logos/flat-color graphics.

8. Missing image alt text [MEDIUM]

502 of 658 image slots have no alt text. The fast win: **8 template images repeat on every page** — fixing them once clears the count across all 62 pages. In **Media** → **Library**, click each file and fill the **Alt Text** field:

File	Paste this alt text
53DB4F05-...C9281.webp (your logo)	Momentum Fitness logo
Email-Logo.png	(leave blank — decorative)
cassie.jpg	FILL-IN Cassie's role, e.g. Cassie, personal trainer at Momentum Fitness
Jade.jpg	FILL-IN Jade's role at Momentum Fitness
DREW.jpg	FILL-IN Drew's role at Momentum Fitness
mona.jpg	FILL-IN Mona's role at Momentum Fitness
Dina.jpg	FILL-IN Dina's role at Momentum Fitness

For every other image, use this formula: *what's happening + where*. Examples:

- A training photo → Coach guiding a client through a barbell squat at Momentum Fitness in Pantego, TX
- A gym interior → Private training floor at Momentum Fitness, Arlington & Mansfield TX
- The 64 junk-named files (IMG_4769, Screenshot-..., Snapinst.app_...) — add alt text now; when you replace them, rename to something like `personal-training-arlington-tx.webp` before uploading.

9. Structured data (schema) [MEDIUM]

Good news: your site already outputs proper local-business schema. Two fixes:

A) Fix the opening hours (all 50 pages at once). Your schema currently claims you're open **9 AM–5 PM, 7 days a week** — almost certainly a default. Rank Math → **Titles & Meta** → **Local SEO** (or **Rank Math** → **Local SEO**) → set your **real** hours: **FILL-IN your actual hours**, e.g. Mon–Fri 05:00–20:00, Sat 07:00–12:00, Sun closed.

Make sure they match your Google Business Profile exactly.

B) Add FAQ schema to key pages. Edit Pricing and each condition page in the block editor → add a **Rank Math** → **FAQ block** → use drafts like these (edit the answers to be true):

- **Q:** How much does personal training cost at Momentum Fitness? **A:** FILL-IN — e.g. Our programs start at \$X/session; book a free discovery visit for a custom plan.
- **Q:** Do you take insurance or HSA/FSA? **A:** FILL-IN — e.g. We're self-pay but provide superbills and accept HSA/FSA with a Letter of Medical Necessity.
- **Q:** Where are you located? **A:** We're at 2401 W Pioneer Pkwy #103, Pantego, TX 76013 — serving Arlington and Mansfield.

C) Review markup (optional). On the Results page, mark up a few real client reviews with Rank Math's review schema so your Best-Gym-2024/2025 recognition can show as stars.

Validate everything at <https://search.google.com/test/rich-results> — paste the homepage URL; it should show "Local business" with no errors.

10. Internal-link gaps [LOW]

- **VIP Membership is orphaned** (a sales page nothing links to). Add it to your main menu: wp-admin → **Appearance** → **Menus** → add the *VIP Membership* page → Save. Also link to it from the Pricing page body.
- **Privacy / Terms** footer links aren't rendering as real links — check the footer template in Elementor and make sure they're proper **Link** elements, not plain text.
- **Email-protection links:** the Cloudflare `/cdn-cgi/l/email-protection` link shows on all 62 pages. Harmless, but if you'd rather, display your email as plain text or an image and turn off Cloudflare's email obfuscation.

How to check your work

After you've made changes, you can **re-run the same audit** that produced this list to see the numbers drop:

```
``bash .venv/bin/python seo_audit.py ``
```

Watch these counts in the summary fall toward zero:

- `default_suffix_titles` (§2) • `multi_or_no_h1` (§5) • `missing_descriptions` (§6)
- `noindex_pages` should *rise* to ~15 as you noindex the junk/trainer pages (§3–§4) — that's correct.

Then:

- **Schema:** <https://search.google.com/test/rich-results>
- **Speed (after the video fix):** <https://pagespeed.web.dev> — test the homepage, watch **Largest Contentful Paint** improve.

Realistic time budget

Session	Do	~Time
1	§1 video + §4 junk pages + §9A hours	~1.5 hr
2	§2 titles (paste from the tables)	~2 hr
3	§5 H1s + §3 trainer pages	~2 hr
4	§7 image plugin + §8 alt text + §6 descriptions + §10 links	~2 hr
